## AMENDMENT TO THE CLAIMS

- 1. (previously presented) A computer readable medium including instructions readable by a computer which, when implemented, cause the computer to handle information by performing steps comprising:
  - receiving data over a wide area network indicative of input from a client device and an indication of a grammar from the client device to be used with the data indicative of the input to perform recognition;
  - sending data indicative of recognition results for the data indicative of the input to a remote location on the wide area network;
  - receiving from the remote location data indicative of a prompt for the user to be used when the recognition results are indicative of no recognition of the input from the client;
  - converting the data indicative of the prompt to speech data when the recognition results are indicative of no recognition of the input from the client; and
  - sending the speech data to the client device over the wide area network.
- 2. (original) The computer readable medium of claim 1 wherein the indication provides a reference to a location of the grammar.
- 3. (original) The computer readable medium of claim 1 wherein the indication includes a reference to a language for recognition.

## 4-6 (Cancelled)

- 7. (original) The computer readable medium of claim 1 wherein the recognizer comprises a speech recognizer and the grammar relates to speech recognition.
- 8. (original) The computer readable medium of claim 1 wherein the recognizer comprises a handwriting recognizer and the grammar relates to handwriting recognition.
- 9. (original) The computer readable medium of claim 1 wherein the recognizer comprises a gesture recognizer and the grammar relates to gesture recognition.
- 10. (original) The computer readable medium of claim 1 wherein the recognizer comprises a visual recognizer and the grammar relates to vision recognition.
- 11. (previously presented) A method for speech recognition in a client/server network, the method comprising:
  - receiving data over a wide area network from a client device indicative of input speech together with an indication of a grammar to be used with the data indicative of input to perform recognition;
  - processing the data using the grammar with a recognizer to obtain recognition results; and
  - sending the recognition results for the data indicative of the input to a remote location on the network;
  - receiving from the remote location data indicative of a prompt for the user to be used when the recognition results are indicative of no recognition of the input from the client;
  - converting the data indicative of the prompt to speech data when the recognition results are indicative of no

recognition of the input from the client; and sending the speech data to the client device over the wide area network.

- 12. (original) The method of claim 11 wherein the indication provides a reference to a location of the grammar.
- 13. (original) The method of claim 11 wherein the indication includes a reference to a language for recognition.

## 14-19 (Cancelled)

- 20. (New) The method of claim 11 wherein the remote location on the network is the client device.
- 21. (New) The computer readable medium of claim 1 wherein the remote location on the network is the client device.
